Subject: Re: Update on Malondialdehyde in Plasma

Dear Jan,

Mark Bentley has provided the following update on the validation for malondialdehyde in plasma:

There were a number of refinements to the precipitation steps required in order for water to be a representative replacement matrix. Without protein precipitation, the response apparent for directly derivatised plasma samples was approximately half that for an equivalent concentration in water.

The validation is now in progress and expected to be completed by 09/28, with data to Philip Morris for review by 10/02.

Please contact me if you have any questions or concerns.

Our email system is back up and running!

Regards,

Jill
